8. TEACHING**(a) *Areas of special interest and accomplishments*****SUMMARY OF TEACHING DOSSIER:**Undergraduate Education .

Presently I serve on the 4th year undergraduate committee. This is to act as a representative to the medical school for the department of Orthopaedics final year students and review their electives.

I have also been involved in education of students on physical exam within orthopaedics, The physical exam of the foot and ankle is currently on file at the University.

I have been involved in clinical teaching of medical students since 1998. Teaching has included physical exam, lectures on foot and ankle exam, and clinical teaching at St. Paul's hospital. The medical students have been educated at Trauma rounds and foot and ankle rounds. Medical students have also attended the foot and ankle clinic.

I have been on the year 4 committee as the Orthopaedic representative since March 2008.

Graduate Education

Residents have attended the foot and ankle service since 1998. An increasing number of resident rotations have been performed, with 8 UBC residents performing rotations in 2007 to 2008, and three visiting residents attending.

I have been involved with final year resident exam preparation annually since 1998. Resident teaching has been based over a foot and ankle round performed each Tuesday morning, and participation in lectures on the Thursday morning half day.

Recently the Canadian Orthopaedic Foot and Ankle Society has recognized a need to recruit residents into fellowship positions in foot and ankle to fill the many job vacancies across Canada. I have therefore spoken to the Canadian Orthopaedic Residents association meeting, and circulated the presentation to surgeons across Canada to give the talk to their own programs. We have an opportunity to provide better care and keep trained residents in Canada.

I was involved in resident selection this year, and have served on the residency training program committee for a number of years.

Postgraduate Education

The fellowship program was started in 2000, and 14 fellows have been trained to date. Financial support for overseas residents was obtained in 2005.

Postgraduate education has also involved a number of national and international activities. The Canadian orthopaedic foot and ankle society symposium was first held in Vancouver in 2003, being repeated in 2005 and 2007.

I have supported arthroscopic education having run the fall course of the Arthroscopy Association of North America, and been a Master instructor for the association in Chicago for 3 years in a row.

What I find stimulating in teaching.

Presently there is a huge demand for foot and ankle education. I enjoy strategizing solutions for this problem. Some of these strategies have been:

1. Being part of a team in a clinic with Dr Penner and Dr Wing
2. Holding teaching rounds and seeing the end result when medical students, residents and fellows leave the rotation
3. Organizing a meeting with a local orthotic company to educate general practitioners on foot and ankle exam, and having 150 doctors fill the room.
4. Organizing a symposium and having the faculty enjoying the teaching and the audience interacting and learning.
5. Setting up primary care teaching strategies at St. Pauls hospital.
6. Teaching fellows surgery and watching their confidence grow.
7. Talking to residents and getting them interested in foot and ankle and becoming a mentor and role model. Then seeing them write papers and choose foot and ankle as a career, and then watch their careers evolve.

Undergraduate (Medical Students)

ORPA 430 Introduction to Orthopaedics (Clinical Skills II)
Musculoskeletal pathology, including baseline levels of knowledge, skill and attitude, plus surgical exposure to orthopaedic injuries and management.

ORPA 475 Clinical Clerkship in Surgery (Trauma Seminars)

ORPA 508 Physical Examination of the Knee (Clinical Skills II)
Selected topics in orthopaedic surgery and related basic sciences. Given in alternate years

ORPA 509 Orthopaedic Surgery Problem Solving Seminar (Year III)
The second year of the above program which will be given in alternate years.

Graduate (Residents)

ORPA 715 Evaluation of new patients and diagnosis and treatment of appropriate diseases. Basic signs and clinical features are both stressed in the total management of the patient. Two hours per week in the Outpatient Department under supervision of an orthopaedics faculty member.

ORPA 716 Evaluation of orthopaedic diseases and injuries in patients at bedside. A review of clinical features is correlated with relevant physiology and pathology.

ORPA 717 Formal presentations by the orthopaedic residents, fellows, faculty and guests. Subject matter includes the whole spectrum of orthopaedics.

ORPA 718 Patients with a variety of rheumatological disorders are presented for discussion and evaluation in this combined conference, which rheumatologists and orthopaedic surgeons who have a special interest in reconstructive surgery attend. During each weekly two hour session, patients with difficult management problems are presented for clinical evaluation and discussion of medical and orthopaedic treatment.

ORPA 719 A course in clinical anatomy as applied to orthopaedics. A regional approach involving surgical dissections in cadavers. Each session lasts two hours. Emphasis is on surgical anatomical

approach.

ORPA 720 Weekly lectures by orthopaedic faculty and guest faculty from other departments. Lecture topics include applied physiology, anatomy, and pathology as they relate to orthopaedic diseases.

ORPA 721 A series of seminars is given weekly, and during each 2-hour session a topic in clinical orthopaedics is reviewed. The subject matter includes the whole spectrum of orthopaedics. One or more faculty members are in attendance at each seminar.

ORPA 722 Case presentation in paediatric orthopaedics, stressing history, physical findings and total management of the patient, including a review of paediatric fractures with x-rays.

ORPA 723 The practical application of orthopaedics in the operating room with discussion of techniques of surgery, anatomy, pathology, pathophysiology and complications of diseases.

ORPA 724 Orthopaedic traumatology is reviewed, with emphasis being placed on applied basic science, surgical anatomy, diagnosis and definitive management. These sessions are supervised by a faculty member and are held weekly, each session lasting one hour.

ORPA 725 A review of musculoskeletal oncology and related problems with presentation of clinical and laboratory information, radiographs and pathological materials. One and one-half hours monthly

ORPA 904 A series of 60 seminars in orthopaedics and traumatic surgery given over a two-year period: thirty sessions in each of the two years. One evening per week throughout the Winter Session. For post-graduate students proceeding to Certification and Fellowship of the Royal College of Physicians and Surgeons of Canada

9. **SCHOLARLY AND PROFESSIONAL ACTIVITIES**

(a) **Areas of special interest and accomplishments**

Teaching:

See section 8 (a)

Arthritis and Reconstructive Surgery:

- Studies on infection in total hip arthroplasty. See CV: Not a current area of active research.

Foot and Ankle Surgery:

- Tourniquet research; Studies on complications and reduction of tourniquet pressure in surgery.
- Pathways for foot and ankle care: Development of pathways reducing cost and improving patient education. 3 M award for quality improvement in health care.
- Outcomes research in hindfoot arthritis: Principle investigator and co founder of multi center database.
- Diabetic foot care: Studies on outcomes of limited foot amputations in diabetic patients.
- Arthroscopic foot and ankle surgery; Development of techniques; studies on outcomes of arthroscopic ankle fusion.
- Bone graft substitutes: Pilot study on PDGF 2 for foot and ankle fusions completed for an FDA study. Pivotal study in progress.

Basic Science Research:

MSc. Kinesiology, Simon Fraser University

- “Forces during Femoral Lengthening in Children”, successfully defended in June 1990, M Ch. Thesis, Aberdeen University.
- “The Biomechanics of Distraction Callus Created during Ilizarov Limb Lengthening in Sheep”, successfully defended September 1996. Graduated May 1997.
- Cadaver study on the relative strength of lateral ligament reconstruction versus repair.

Research Coordinator

Research co ordination has included:

1. CHIR grant application. This grant was submitted to support a randomized prospective study on ankle fusion versus replacement. The grant application was submitted in December of 2007. Further funds for this study have been obtained from the American Orthopedic Foot and Ankle Society and the Canadian Orthopaedic Research Legacy fund.
2. We have conducted a pilot study for Biomimetic on the use of GEMOS (recombinant PDGF) for foot and ankle fusions. This was an FDA study. 25 of 60 Canadian patients were entered from the Vancouver arm. The results of the Canadian study were presented at the AOFAS meeting in 2008.
3. A database has been set up studying the outcomes of end stage ankle arthritis. This database was used to publish a comparison of preoperative scores of end stage ankle and hip arthritis. This paper won the Roger Mann Award for best

paper at the 2007 meeting of the American Orthopaedic Foot and ankle Society. Two other presentations are presently being made this year based on this database, and an increasing number of papers will be written as this study group matures. Currently the database contains patients enrolled since 2003.

4. Tourniquet research. A series of studies have been completed outlining the current risks of tourniquet use. Further studies include articles on the limb occlusion pressure of wide and narrow tourniquet cuffs, and a randomized prospective study on the use of limb occlusion pressure in foot and ankle practice.
5. Development of foot and ankle arthroscopy: Providence is a leading center in foot and ankle arthroscopy. We wish to develop a similar database for foot and ankle arthroscopy, and develop techniques to improve the outcome of foot and ankle fusions. Studies are currently underway to outline the safety of a medial portal for ankle arthroscopy.
6. I am principle investigator for a study on the use of Tigeracylin for diabetic foot infections. This study is being completed.
7. Principle investigator for Carticept study, a cartilage replacement material, initiating in September 2009.
8. Principle investigator for Amplex study, a bone stimulating hormone manufactured by Bioset inc.
9. Investigator initiated study, rhPDGF for treatment of OCD lesions of the talus.
10. Investigator initiated study, rhPDGF for treatment of patients with non operative treatment of Weber B ankle fractures.

4. **PATENTS**

Ilizarov force distraction apparatus: Patent with Dr. W. G. Mackenzie at the Alfred I. Dupont institute.

In progress: Patent on instrumentation for midfoot arthritis.

Pending US (US201121864A1) and European (EP2363087A1) patent applications, "Fastening Systems for Prostheses"

5. **SPECIAL COPYRIGHTS**

6. **ARTISTIC WORKS, PERFORMANCES, DESIGNS**

7. **OTHER WORKS**

8. **WORK SUBMITTED (including publisher and date of submission)**

9. **WORK IN PROGRESS (including degree of completion)**

1. Biomechanical analysis of lateral ligament reconstruction.
2. Cost analysis of ankle replacement, fusion compared to hip and knee replacement.
3. The medial portal for ankle arthroscopy: An Anatomic and MRI study.
4. Combined total ankle arthroplasty and hindfoot fusion
9. Assessment of outcome measurement tools for end stage ankle arthritis.
11. Augment II bone graft substitute for foot and ankle fusions: Pivotal study in progress.
16. Randomized prospective study of ankle fusion vs. replacement.
17. Development of a revision ankle replacement system.
18. Development of a primary ankle joint replacement.

19. Development of a database for foot and ankle arthroscopy
20. Treatment of osteochondral defects of the talus with PDGF
21. Treatment of diabetic ankle fractures with arthroscopic reduction, a fibular nail and PDGF.
22. Five year prospective review of outcomes of ankle replacement and fusion: A prospective study
23. Use of exogen to treat fusions in foot and ankle
